enable a user at the user station to select content [provided by] from each of a plurality of independent publishers;

effect transport of the selected content from each of the plurality of publishers to the user station over a communications network and, without user intervention, effect storage of the transported content to the storage device such that the content is retained on the storage device upon shutting down of the user station and/or deactivation of the software product; and

effect presentation of the stored content to the user at the user station with a user interface that is customized to the respective [publisher] publishers.

24. (Amended) The software product as set forth in claim 22, wherein the user interface is provided by the respective [publisher] publishers.

25. (Amended) The software product as set forth in claim 21, wherein the user interface is provided by the respective [publisher] publishers.

34. (Amended) The software product as set forth in claim 21, wherein the transport of the selected content to the user station is effected in accordance with an object manifest, the object manifest including an identification of a plurality of objects from different ones of the respective publishers, and a source address for each of the respective publishers.

35. (Amended) The software product as set forth in claim 21, wherein the selected content is transported from each of the independent publishers to the user station, without first passing through an online service provider that serves multiple ones of the independent publishers.

38. (Amended) The software product as set forth in claim 21, wherein the selected content is transported from each of the independent publishers to the user station, without

first passing through an information distribution service that serves multiple ones of the independent publishers.

40. (Amended) A software product for use at a user station, the user station including a processor and a storage device, the software product comprising computer executable instructions that, when executed by the processor:

enable a user at the user station to select content [provided by] from each of a plurality of independent services;

effect transport of the selected content from each of the plurality of [publishers] services to the user station over a communications network and, without user intervention, effect storage of the transported content to the storage device such that the content is retained on the storage device upon shutting down of the user station and/or deactivation of the software product; and

effect presentation of the stored content to the user at the user station with a user interface that is customized to the respective [service] services.

43. (Amended) The software product as set forth in claim 41, wherein the user interface is provided by the respective [service] services.

44. (Amended) The software product as set forth in claim 40, wherein the user interface is provided by the respective [service] services.

53. (Amended) The software product as set forth in claim 40, wherein the transport of the selected content to the user station is effected in accordance with an object manifest, the object manifest including an identification of a plurality of objects from different respective ones of the services, and a source address for each of the respective services.

59. (Amended) A software product for use at a user station, the user station including a processor and a storage device, the software product comprising a viewer

capable of handling a markup language and comprising computer executable instructions that, when executed by the processor:

enable a user at the user station to select one or more remote information object sources from a plurality of available remote information object sources operated by independent publishers;

effect transport of one or more information objects, at least one of the information objects being represented using the markup language, from any selected one of the remote information object sources to the user station over a communications network and, without user intervention, effects storage of the transported information object(s) to the storage device such that the information object(s) are retained on the storage device upon shutting down of the user station and/or deactivation of the software product; and

enable, for each stored information object, presentation of that object using the viewer to the user at the user station with a look and feel that is specific to the respective publisher.

62. (Amended) The software product as set forth in claim 60, wherein the [user interface] look and feel is provided by the respective publisher.

63. (Amended) The software product as set forth in claim 59, wherein the [user interface] look and feel is provided by the respective publisher.

64. (Amended) The software product as set forth in claim 59, further comprising computer executable instructions that, when executed by the processor:

effect a network connection between the user station and the communications network, via a network provider,

wherein the [user interface] look and feel is provided by the respective publisher independently of the network provider.

65. (Amended) The software product as set forth in claim 59, further comprising computer executable instructions that, when executed by the processor:

Inventor: Richard R. Reisman  
SUPPLEMENTAL AMENDMENT  
Page 5

effect a network connection between the user station and the communications network, via a network provider,

wherein the [user interface] look and feel is provided without cooperation of the network provider.

78. (Amended) A software product for use at a user station, the user station including a processor and a storage device, the software product comprising a viewer capable of handling a markup language and comprising computer executable instructions that, when executed by the processor:

enable a user at the user station to select one or more remote information object sources from a plurality of available independently operated remote information object sources;

effect transport of one or more information objects, at least one of the information objects being represented using the markup language, from any selected one of the remote information object sources to the user station over a communications network and, without user intervention, effects storage of the transported information object(s) to the storage device such that the information object(s) are retained on the storage device upon shutting down of the user station and/or termination of the software product; and

enable, for each stored information object, presentation of that object using the viewer to the user at the user station with a look and feel that is specific to the respective information object source.

81. (Amended) The software product as set forth in claim 79, wherein the [user interface] look and feel is provided by the respective remote information object source.

82. (Amended) The software product as set forth in claim 78, wherein the [user interface] look and feel is provided by the respective remote information object source.

83. (Amended) The software product as set forth in claim 78, further comprising computer executable instructions that, when executed by the processor:

Inventor: Richard R. Reisman  
SUPPLEMENTAL AMENDMENT  
Page 6

effect a network connection between the user station and the communications network, via a network provider,

wherein the [user interface] look and feel is provided by the respective remote information object source independently of the network provider.

84. (Amended) The software product as set forth in claim 78, further comprising computer executable instructions that, when executed by the processor:

effect a network connection between the user station and the communications network, via a network provider,

wherein the [user interface] look and feel is provided without cooperation of the network provider.

Please ~~ADD~~ the following new claims:

*CJ*  
--97. The software product as set forth in claim 59, wherein the at least one of the information objects is a Web page.

--98. The software product as set forth in claim 78, wherein the at least one of the information objects is a Web page.--

#### REMARKS

Claims 21-98 are pending in the above-identified application as a result of the instant amendment. In the Amendment, claims 21, 24, 25, 34, 35, 38, 40, 43, 44, 53, 59, 62-65, 78, and 81-84 are amended, as discussed in detail below. In addition, Claims 97 and 98 are added. Authorization to charge the required fee for the newly-added claims is provided in the attached Amendment Transmittal letter. An Appendix, including a copy of all pending claims (claims 21-98 inclusive), as they will appear after the instant Supplemental Amendment is entered, free from markings, is attached hereto.

Applicant would like to take this opportunity to thank Examiner Peyton for the diligence and courtesies she extended to Applicant's representatives, Robert Westerlund
